PROFESSIONAL SUMMARY

Resourceful, results-driven Java Full Stack Developer with 4+ years of experience designing, developing, and deploying scalable enterprise web applications. Adept in both front-end frameworks (Angular, React) and robust backend technologies (Java, Spring Boot, Microservices). Proven expertise in delivering client-focused solutions leveraging REST APIs, cloud platforms (AWS), CI/CD pipelines, agile methodologies, and modern database architectures (SQL, NoSQL). Skilled communicator and collaborative team member, committed to creating high-quality, performant, and secure software

TECHNICAL SKILLS:

- **Front-end Technologies:** HTML5, CSS3 / Bootstrap, JavaScript (ES6+), TypeScript, React.js OR Angular, Redux (for React)
- **Back-end Technologies:** Java, Spring Boot, RESTful APIs, gRPC, Microservices architecture Hibernate / JPA, Maven, JSON & XML
- **Database:** PostgreSQL, MySQL, MongoDB, Oracle, NoSQL
- **DevOps & Tools:** AWS (core services: EC2, S3, Lambda, RDS), Docker, Jenkins, Kubernetes, Git
- **Methodologies:** Agile Methodologies, Scrum, SDLC
- **Testing:** JUnit, Selenium, Mockito

Professional Experience

Role: Software Development Engineer

Client: Jefferies - New York, USA

March 2024-Present

Project description:

Designed and built a large-scale fintech platform supporting real-time user transactions for a leading national bank. Implemented Java microservices and Spring Boot APIs for secure, high-volume financial operations. Developed responsive Angular interfaces for superior customer experience. Integrated AWS cloud infrastructure and CI/CD pipelines for reliable service delivery. Ensured top-tier data security and compliance with industry standards.

Responsibilities:

- Developed scalable microservices to process user transactions, ensuring high availability and fault tolerance using Spring Boot and Docker containers.
- Designed RESTful APIs for seamless integration between backend services and client-facing web applications.
- Led implementation of responsive, dynamic UIs with Angular, optimizing for accessibility and performance across devices.
- Implemented CI/CD pipelines with Jenkins and GitHub Actions, streamlining deployment processes and improving code quality.
- Integrated AWS cloud services (EC2, S3, Lambda) for secure, scalable data management and microservice deployment.
- Collaborated cross-functionally with product managers and QA to deliver features in two-week Agile sprints, consistently meeting project milestones.
- Developed automated test suites with JUnit and Selenium, enhancing unit test coverage and strengthening defect detection.
- Enforced security measures including OAuth2 authentication and API rate limiting, strengthening platform defenses against vulnerabilities.

- Enhanced database performance by indexing, query optimization, and implementing PostgreSQL partitioning strategies.
- Led code reviews and mentorship for junior developers, promoting adherence to clean code standards and enterprise best practices.
- Improved application scalability and maintainability through modular design and adherence to OOP principles.
- Documented all critical workflows, deployment processes, and troubleshooting guides to support DevOps and production operations.

Environment: Java 17, Spring Boot, Angular 12, AWS, Docker, Jenkins, PostgreSQL, GitHub

Role: Software Engineer

Client: **Popcornapps – Hyderabad, India**

October 2019– May 2022

Project description:

Executed the development of scalable, cloud-based enterprise applications focused on CRM and digital transformation services. Utilized Java Spring Boot microservices and ReactJS front-end to deliver seamless and responsive user experiences. Managed data efficiently with MongoDB and PostgreSQL integration for various business workflows. Automated deployments leveraging Kubernetes and GitLab CI/CD to ensure high availability and performance in cloud environments.

Responsibilities:

- Developed and maintained microservices using Java and Spring Boot to deliver scalable backend functionality for enterprise applications.
- Designed and implemented dynamic user interfaces with ReactJS, focusing on usability and responsiveness across devices.
- Integrated MongoDB and PostgreSQL databases for effective handling of structured and unstructured data.
- Collaborated with cross-functional teams including product managers, designers, and QA to translate business requirements into technical solutions.
- Automated deployment pipelines using Kubernetes and GitLab CI/CD tools to streamline release cycles and improve system reliability.
- Implemented secure API endpoints and ensured data protection compliance across cloud environments.
- Conducted thorough code reviews and provided mentorship to junior developers to uphold coding standards and best practices.
- Incorporated Agile methodologies to manage development workflows and prioritize feature delivery in iterative sprints.
- Troubleshoot and resolved application issues in development and production environments to maintain service continuity.
- Created and maintained technical documentation to support knowledge sharing and facilitate ongoing system maintenance.

Environment: Java 11, Spring Boot, ReactJS, MongoDB, PostgreSQL, Kubernetes, GitLab CI/CD, Docker, AWS Cloud (EC2, S3, Lambda), RESTful APIs, Agile (Scrum), Git, Jira

EDUCATION:

Master of Science in Computer Science

Auburn University at Montgomery, Alabama, USA

Bachelor of Technology, Computer Science Engineering

Sreyas Institute of Engineering and Technology
